Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This group of five brick houses on the north side of the 1000 block of Boyd St. represent three different styles of rowhouses. 1018-1020 are two-bay-wide, two-story-and-attic houses, built in the late 1840s; 1022-1024 are a pair of three-story gable-roofed houses, built in the 1850s; and 1026 is the remainder of a pair of early Italianate-style houses built in the 1870s.

1018-1020 are generally typical of a popular type of Baltimore rowhouse built in the late 1840s and 1850s to serve the city's growing working class population. The lower-pitched gable roof allowed for a more spacious upper story, which now could be lit by small rectangular windows at both the front and rear of the house, instead of the earlier dormer windows. Despite its practical nature, this new feature had its roots in a stylistic change in Baltimore's fashionable housing, the small "attic" windows being an important part of the façade design of much larger town mansions being built in the new Greek Revival style. 1022-1024 are built in similar fashion but have a full third story instead of the attic story of 1018-1020.

The houses vary in height, but all are 12' wide, and occupy lots 59'6" deep. Each house is two-rooms deep and the kitchen is located in the basement. The houses are constructed in running bond, and were always painted. The low-pitched gable roof of 1018-1020 has a simple corbelled brick cornice. The gable roof of 1022-1024 has wooden cornice consisting of a crown molding set above a frieze decorated with a row of dentil moldings. 1026 has a shed roof with a simple brick cornice decorated with brick modillions. Each house has a chimney at the rear of the kitchen addition.

All door and window openings have flat wood lintels and sills. The window openings are filled with 1/1 or 6/6 replacement sash. Doorways have single-light transoms but all of the doors are modern six-panel replacements. The houses at 1018-1024 sit on high basements, lit by single-light transoms. The entrances are reached by seven wood or concrete steps. 1026 sits on a much lower basement, with the entrance reached by three brick steps.

The houses are two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace. Kitchens are located in the tall basement.

3. Significance

religion science sculpture X social/ humanitarian theatre transportation other: specify

Prepare both a summary paragraph of significance and a general statement of history and support.

1018-1020 Boyd St. are significant as being representative of a large group of such houses built in the 1840s and 1850s to accommodate the growing labor force centered around the Baltimore waterfront. Although showing stylistic influences from Greek Revival style buildings constructed in Baltimore in the 1830s and 1840s (in the proportions of the attic windows, the chaste exterior details, and the double parlor floor plan), the outstanding feature of these houses is their extreme simplicity of design and detailing. They are practical adaptations of a current mode of building, designed to meet the need for efficient, low-cost housing for a rowing working class community. The floor plan is essentially the same as that of the earlier Federal-style two-and-a-half story houses, but the opening between the two rooms is wider, reflecting popular Greek Revival tastes. The increase in height of the third story (from a dormer story to an attic story) allowed the third story to be divided into two separate rooms, in place of the one open room of the dormer story, thus providing welcome additional private living space to large families or those who had to take in boarders. The houses do not differ markedly from similar two-story-and-attic houses built on nearby main streets—they are simply somewhat narrower versions priced to serve less affluent residents of the old walking city.

1022 – 1026 Boyd St. are significant as representing a very plain type of small street house that was constructed to provide inexpensive housing for the working class residents of the area, most of whom were German or Irish at the time of construction. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the middle and late nineteenth century. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell \$1,000 - \$1,500; small street houses for \$600 - \$800. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards, me nation's first railroad, and its related railroad-oriented industries, like car and rail shops. Housing of this type was built to provide inexpensive housing for the wide variety of both Irish and German immigrants who came to southwest Baltimore to work in railroad-related industries in the decades before and after the Civil War.
